Filters

The **Big One** is a unique polypropylene housing for professional applications where high performances and reliability is required. Designed to treat high quantity of water, it's a two-piece compact container, that can fit 23" & 40" filtering elements. The housing is made with 3" female In/Out threaded connections and it's equipped with a plastic drain plug and a plastic relief valve. The Big One is supplied with a stainless steel clamp that enables it to quickly and easily open and close the housing for cleaning or replacing the filter element.

Washable (re-useable) and replaceable elements are available with a wide range of micron ratings from 1-10 to 250. Maximum capacities range from 8 to 65 m³/hr, depending on micron rating and element length.

The maximum working pressure is 6 Bar with a burst pressure of 20 Bar.

AP-PRO Self Cleaning Filter

Innovative filter design with 80 micron washable screen enables in-line cleaning, manually actioned, to brush and flush the dirt from the mesh without stopping the water flow through the filter. The cleaning function is carried out while the filter continues to operate. Flow direction can be changed to horizontal or vertical with flow in either direction.
